Underground Feeder Cable 600V

Application

This cable is intended for use underground as a feeder or branch circuit cable and is permitted for direct burial in the earth. It can be installed in wet, dry, or corrosive locations as specified by the NEC. It may also be used for interior wiring in compliance with NEC requirements for nonmetallic-sheathed cable.

Construction

- **Conductor:** The conductors are either solid, soft, uncoated copper or stranded, uncoated copper, laid parallel with a bare grounding conductor.
- **Insulation:** The insulation is color-coded polyvinyl chloride (PVC) with a nylon polyamide covering, rated for 90°C in dry locations.
- **Jacket:** A sunlight-resistant gray polyvinyl chloride (PVC) jacket is applied over and around the insulated and bare conductors.

Standards

- UL 493 and UL 83
- ASTM B3 and ASTM B8
- Sunlight Resistant
